

David J. Guijosa Infante

Riverside, CA • (951) 941-8408 • davidgin641@gmail.com • linkedin.com/in/davidguijosa • github.com/Davidzent • zntsns.com

SUMMARY

Full-Stack Software Engineer with 3+ years of experience building web applications, RESTful APIs, and cloud-based solutions with Java/Spring Boot, TypeScript, Angular, React, and Node.js on GCP. Skilled in microservices architecture, OAuth 2.0/JWT authentication, CI/CD pipelines, and SQL databases; cut client deployment cycles by 30% with Docker-based pipelines across 5+ freelance projects.

SKILLS

Languages: Java, JavaScript, TypeScript, C#, SQL

Frontend: Angular, React, HTML5, CSS3, Vite

Backend: Node.js (Express), Spring Boot, REST APIs, Microservices, OAuth 2.0 / JWT

Databases: PostgreSQL, MySQL, SQLite

Cloud & DevOps: GCP, Firebase Hosting, Docker, GitHub Actions, Jenkins, SonarCloud

Testing & Tools: Vitest, Supertest, JUnit, Postman, Git, Agile/Scrum

EXPERIENCE

Full-Stack Software Developer | *Freelance*

Jun 2023 – Present

- Architected and deployed full-stack web applications for 5+ clients using Angular, TypeScript, and Node.js Express; containerized on GCP with Docker-based CI/CD pipelines, cutting deployment cycles by 30%.
- Built OAuth 2.0/JWT authentication flows and a reusable Angular component library adopted across 5 client projects, cutting per-project iteration time by 10%.
- Designed responsive Angular UIs with dynamic form validation and 5+ third-party API integrations, raising conversion by 10% across client sites.

Software Engineer | *Revature — placed at Cognizant Technology Solutions*

Jan 2022 – Apr 2023

Enterprise training program (Jan – Apr 2022), then full-time client placement at Cognizant (Apr 2022 – Apr 2023).

- Developed 3 RESTful microservices in Java and Spring Boot for authentication, authorization, and core enterprise business logic; held 80% JUnit coverage enforced by SonarCloud quality gates.
- Built and owned Jenkins CI/CD pipelines end-to-end, improving team delivery velocity by 25% and eliminating manual deployment errors; automated email notification services cut operational workload by 40%.
- Delivered a production MVP 3 days ahead of a 4-week deadline through modular Spring Boot architecture and proactive stakeholder communication.
- Led a team of 5 developers within a 15-person cross-functional group across 12+ full-stack training projects (Java, Spring Boot, Angular, Node.js, PostgreSQL), improving sprint delivery efficiency by 10%.

PROJECTS

Portal Pantry — Food-Delivery Platform | *React 19 • TypeScript (strict) • Node.js / Express* — Live:

zntsns.com/portal-pantry • Code: github.com/Davidzent/Portal-Pantry

- Built a food-delivery platform with customer and store-owner roles: menus, cart and checkout, live order tracking, reviews, and an owner dashboard for menus, order queue, finances, and review replies.
- Architected a three-layer design — React UI → typed TypeScript SDK → Node.js/Express REST API — with bearer-token session auth, ownership checks, status-coded validation (401/403/409/422), and SQLite persistence.
- Wrote 28 Vitest + Supertest integration tests covering success and failure paths across auth, catalog, orders, and owner finance; GitHub Actions CI/CD deploys passing builds to Firebase Hosting.

Neural Network — Flappy Bird AI | *Java • Neural Networks • Genetic Algorithms* — Code:

github.com/Davidzent/Neural-Network

- Designed and built a feedforward neural network from scratch in Java; applied a genetic algorithm (selection, crossover, mutation) to evolve an autonomous AI agent across hundreds of generations without ML libraries.
- Engineered a custom fitness function and real-time game-state input pipeline; after ~20 generations, evolved agents converged to failure-free play in every observed run.

Tetris — Accounts & Leaderboard | *JavaScript • HTML/CSS • SQL* — Code: github.com/Davidzent/Tetris

- Engineered a browser-based Tetris game with hashed-credential authentication, session management, and a persistent SQL leaderboard ranked across 10 difficulty levels.

Multiplayer Cooking Game (In Development) | *C# • Unity • Blender*

- Sole developer of an Overcooked-inspired multiplayer cooking game in C# and Unity with original Blender 3D assets; architected systems for recipe classification, player-action modeling, and NPC routing, now extending to real-time multiplayer.

EDUCATION

Associate of Science, Computer Science | *Riverside City College — Riverside, CA*

Certificate of Achievement, C++ Programming — Riverside City College
